

Newest thing in solar control

Dontek has launched its latest and most innovative solar controller. The AquaSmart range comprises state-of-the-art technology including app-driven timers.

The AquaSmart will allow immediate control of pool or spa heating remotely, offering convenience as well as saving money and energy. Dontek says its large back-lit LCD module can be easily seen in the bright of day or the dark of night,

and with its simple button layout, it is the most user-friendly product of its kind.

Features include the new multi-fit mounting bracket ensuring a simple set-up on any surface as well as robust industrial sensors offering the highest reliability and accuracy. Additionally, the spooled roof sensor offers tangle-free installation.

Easy-install Enviraflo kit

The new QuikClean Anti-Vortex Single Channel (AVSC) Drain sits flush with the pool floor and virtually disappears beneath its own pebble, render or tile lid.

Secondary safety suction is obsolete with the AVSC and it removes debris more effectively because it's an approved single-suction floor drain.

Cooke says the AVSC was the first drain to be recognised as "unblockable" by the NSF testing authority in the USA and was so advanced at the time of its introduction that VGB compliance tests are based on its performance.

The AVSC can connect to two pumps drawing a combined 860lpm. Dual suction ports also make the AVSC an obvious choice for spas.

The AVSC is available in five colours – Black, Blue, Gold, Grey and White – and colour inserts allow you to change the drain colour if clients change their mind.
